## Wednesday Challenge Form

Group Members: evan

### Problem Statement:

Create a design for a paper airplane and trade it with another group. The group to farthest fly the design that they received won.

### Approach:

Evan and I just used a very simple design where you have to fold the design in 2 times and then create wings. The design that we received was more complicated.

**Solution:** We created a very easy to fold and aerodynamic paper airplane.

**Lessons Learned:** Density flies better than aerodynamic.
