

Date:

Wednesday Challenge Form

Group Members: Garyn and Zachary

Problem Statement:

With using only cards, build some type of tower/house. The tallest creation, wins.

Approach:

We just went for the standard card house where it was made mainly of triangles on top of other triangles.

Solution: We used the standard card house design and it worked pretty well. On one of our later attempts, we actually got a rug to build it on so that there would be more of a grip.

Lessons Learned: Get the more worn out cards and not the ones that are slippery and brand new. A rug also helps.
