## Wednesday Challenge Form

Group Members: Jaden, Raul, Mason

## Problem Statement:

Figure out if it is worth it to take a regular math class or instead write one to one million for an entire school year to guarantee an a

## Approach:

We first each wrote out as many numbers as we could for 30 sec and found that on average you can write 66 numbers in 1 minute. With more math, we found how many numbers one could write in 24 hrs. I don't really want to explain all of the calculations, but we concluded that it would be easier to just take the class

**Solution:** You have to find out how many hours a student does math every school year and how long it would write all of the individual digits up to a million.

## Lessons Learned:

Make sure to factor all variables into a problem
