

Date:

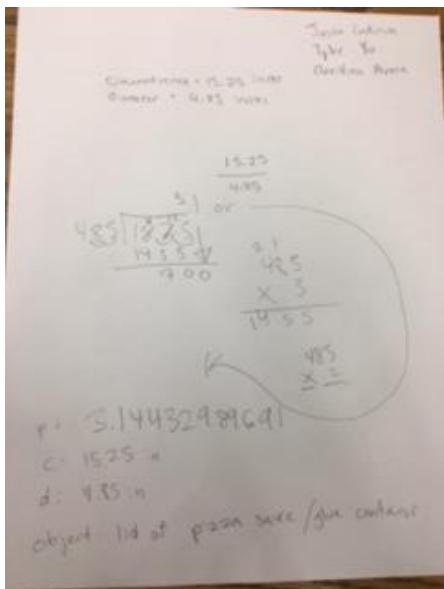

## Wednesday Challenge Form

Group Members: Jason and Christian

### Problem Statement:

The challenge was to estimate the number of pie without using pie (3.14)

### Approach:

We measured a glue container to get the diameter. We used a ruler, and to find the circumference, we used a piece of rope and wrapped it around.

Solution: We used the circumference and diameter of a glue container.

### Lessons Learned:

To only write decimals up to the hundredths.
